APPLY WISE

AI Job Application Copilot

Product status and delivery roadmap

Updated June 2, 2026 | Live: https://apply-wise-1.vercel.app

What is live

Apply Wise is a deployed web product for resume-aware job discovery, truthful application preparation, and pipeline tracking. Users can register publicly and maintain private workspaces.

Live architecture

Layer	Technology	Current role
Web app	Next.js 15 / Vercel	Responsive SaaS interface
API	FastAPI / Railway	Authenticated application API
Database	PostgreSQL / Alembic	Persistent product records
Job source	Adzuna API	Live India listings with attribution
Security	JWT + refresh rotation	Protected user workspaces

Implemented workflow

- Register, log in, log out, and refresh an authenticated session.
- Upload a PDF or DOCX master resume and review extracted evidence.
- Search live Adzuna listings and rank jobs against stored resume skills.
- Save roles, update statuses, and monitor dashboard and analytics metrics.
- Prepare Gemini-enhanced grounded drafts with deterministic fallback.
- Set role keywords, location, and remote-only discovery preferences.
- Add application notes and review visible tracker timeline events.
- Schedule interview rounds inside the application workspace.
- Download authenticated DOCX or PDF exports for prepared resume versions.
- Review persisted free-tier or owner-bypass subscription entitlements.
- Review non-secret health for the configured job-source aggregator.
- Reschedule interviews, edit preparation notes, or remove obsolete rounds.
- Paste a career-page role, score it, and save it into the tracker.
- Pair an unpacked Chrome extension and review job pages before scoring.
- Review ATS-readiness breakdowns and approve or dismiss roles in the 80+ queue.
- Review duplicate protection and draft readiness before opening the employer page for manual submission.
- Inspect common employer application fields locally from the extension without filling or submitting them.

Truthfulness rule

Application drafts use stored resume evidence only. They do not invent employers, skills, projects, responsibilities, or achievements. Every draft remains review-required.

Security and operations

- Argon2id password hashing and HTTP-only refresh cookies.
- Refresh-token rotation with replay detection and token-family revocation.
- Owner admin allowlist configured through Railway environment variables.
- Production secrets stored in Railway variables, not committed to Git.
- Railway health and PostgreSQL readiness probes.
- Schema changes managed with Alembic migrations.

Current limitations

- Adzuna is the only live provider adapter currently connected.
- Resume parsing is deterministic and requires user review.
- Gemini enhancement depends on API quota; grounded fallback drafts remain available.
- Razorpay checkout, webhooks, and paid-plan activation are not connected.
- Site-specific extension extractors, assisted autofill, and Playwright automation remain future work.

Next delivery slices

Order	Slice	Outcome
1	Razorpay billing	Checkout, webhooks, and paid activation
2	Provider adapters	More compliant listing sources
3	Extension extractors	Site-specific capture and autofill plan

Repository practice

README.md, docs/PRODUCT_STATUS.md, and this PDF snapshot are updated as product slices ship. Secrets remain outside the repository.
