APPLY WISE

AI Job Application Copilot

Product status and delivery roadmap

Updated June 3, 2026 | Live: https://apply-wise-1.vercel.app

What is live

Apply Wise is a deployed web product for resume-aware job discovery, truthful application preparation, and pipeline tracking. Users can register publicly and maintain private workspaces.

Live architecture

Layer	Technology	Current role
Web app	Next.js 15 / Vercel	Responsive SaaS interface
API	FastAPI / Railway	Authenticated application API
Database	PostgreSQL / Alembic	Persistent product records
Job source	Adzuna + Remotive APIs	Live India and remote listings with attribution
Security	JWT + refresh rotation	Protected user workspaces

Implemented workflow

- Register, log in, log out, and refresh an authenticated session.
- Upload a PDF or DOCX master resume and review extracted skills, experience, education, and certifications.
- Search live Adzuna and Remotive listings and rank jobs against stored resume skills.
- Save roles, update statuses, and monitor dashboard and analytics metrics.
- Prepare Gemini-enhanced grounded drafts with deterministic fallback.
- Set role keywords, location, and remote-only discovery preferences.
- Add application notes and review visible tracker timeline events.
- Schedule interview rounds inside the application workspace.
- Download authenticated DOCX or PDF exports for prepared resume versions.
- Review persisted free-tier or owner-bypass subscription entitlements.
- Review non-secret health for the configured job-source aggregator.
- Reschedule interviews, edit preparation notes, or remove obsolete rounds.
- Paste a career-page role, score it, and save it into the tracker.
- Pair an unpacked Chrome extension and review job pages before scoring.
- Review ATS-readiness breakdowns and approve or dismiss roles in the 80+ queue.
- Review duplicate protection and draft readiness before opening the employer page for manual submission.
- Inspect common employer application fields locally from the extension without filling or submitting them.
- Capture cleaner Greenhouse, Lever, and LinkedIn job pages through site-aware extension adapters.
- Discover remote roles through the Remotive provider with short-lived API caching and visible attribution.
- Search by role and location directly from the Jobs page while still falling back to saved preferences.
- Follow a guided application workflow for approve, prepare, download, employer-page review, and applied-date tracking.
- Download persisted cover letters as authenticated TXT files after preparation.

- Open the exact saved application workflow directly from a job recommendation.
- Filter job recommendations by high-fit score, provider source, and remote-only roles.
- Review recommendation explanations for matched skills, ATS readiness, missing skills, and seniority fit.
- Edit and save prepared cover letters before downloading or applying.
- Edit tailored resume summary, skills, and experience text before DOCX/PDF download.
- Review extension capture readiness and re-extract the current page before sending a job.
- Request and confirm password resets with one-time tokens and session revocation.

Truthfulness rule

Application drafts use stored resume evidence only. They do not invent employers, skills, projects, responsibilities, or achievements. Every draft remains review-required.

Security and operations

- Argon2id password hashing and HTTP-only refresh cookies.
- Refresh-token rotation with replay detection and token-family revocation.
- Logged-in password changes verify the current password and revoke existing refresh sessions.
- Owner admin allowlist configured through Railway environment variables.
- Production secrets stored in Railway variables, not committed to Git.
- Railway health and PostgreSQL readiness probes.
- Schema changes managed with Alembic migrations.

Current limitations

- Adzuna and Remotive are connected; LinkedIn, Indeed, Naukri, and direct company-career-page adapters remain future work.
- Resume parsing is deterministic and requires user review.
- Gemini enhancement depends on API quota; grounded fallback drafts remain available.
- Payment checkout, webhooks, and paid-plan activation are not connected.
- Additional site-specific extractors, assisted autofill, and Playwright automation remain future work.

Next delivery slices

Order	Slice	Outcome
1	Payment gateway billing	Checkout, webhooks, and paid activation
2	Provider adapters	More compliant listing sources and deeper remote-role filtering
3	Extension extractors	Site-specific capture and autofill plan

Repository practice

README.md, docs/PRODUCT_STATUS.md, and this PDF snapshot are updated as product slices ship. Secrets remain outside the repository.
